Supplementary Figure 1 The magnitude of left ventricular ejection fraction (LVEF) improvement after 1-year of His bundle pacing. The correlation between percent changes in LVEF over the baseline value (the ordinate) and the baseline LVEF value (the abscissa) is given. The horizontal dashed line represents an improvement in LVEF more than 50% of the baseline value while the vertical dashed line separates patients into HFrEF (left) and HFpEF (right).
