

**Supplementary Table 1** Factors associated with ordinary/severe vs critical in logistic regression analysis

<b>Variable</b>	<b>Odds Ratio</b>	<b>95% CI</b>	<b>P</b>
Male	1.527	(0.876–2.660)	0.135
age	1.020	(0.999–1.043)	0.066
respiratory system disease	1.809	(0.778–4.202)	0.168
malignant tumor	1.380	(0.254–7.490)	0.709
endocrine system disease	0.873	(0.391–1.951)	0.741
urinary systems disease	1.477	(0.452–4.828)	0.518
Haemoglobin<115.0g/L	0.619	(0.339–1.129)	0.118
Albumin<40g/L	2.727	(1.161–6.404)	0.021
serum creatinine>81µmol/L	2.483	(1.264–4.876)	0.008
Aspartate aminotransferase>35U/L	1.822	(1.037–3.200)	0.037
hypertension	2.051	(1.104–3.808)	0.023
coronary heart disease	1.784	(0.766–4.153)	0.180
abnormal heart rhythms	1.955	(0.467–8.174)	0.359
cerebrovascular disease	0.786	(0.121–5.118)	0.801
