## Online Supplement

| Age Cohort <br> (years) | Number of <br> patients | Median NTproBNP <br> $(\mathrm{pg} / \mathrm{mL})$ | (Interquartile <br> Range) | $90 \%$ cut-off NTproBNP <br> $(\mathrm{pg} / \mathrm{mL})$ |
| :--- | ---: | ---: | :--- | ---: |
| $<65$ | 53 | 2913 | $(1192-4689)$ | 707 |
| $65-69$ | 50 | 2694 | $(1200-5298)$ | 757 |
| $70-74$ | 117 | 2299 | $(1006-4642)$ | 584 |
| $75-79$ | 167 | 2335 | $(1161-3858)$ | 693 |
| $80-84$ | 155 | 2708 | $(1137-5093)$ | 718 |
| $85-89$ | 68 | 3093 | $(1892-5232)$ | 829 |
| $>90$ | 3886 | $(2167-6927)$ | 952 |  |

Online Table 1. NTproBNP levels at which $90 \%$ of patients with heart failure were detected in

## 5-year age ranges.

|  | All NHF Patients (n=566) | Portsmouth (n=459) | Southampton (n=107) | p Value |
| :--- | :--- | :--- | :--- | :---: |
| Atrial Fibrillation | $107(19 \%)$ | $76(17 \%)$ | $31(29 \%)$ | 0.003 |
| Respiratory disease | $101(18 \%)$ | $82(18 \%)$ | $19(18 \%)$ | 0.979 |
| Hypertension | $52(9 \%)$ | $39(8 \%)$ | $13(12 \%)$ | 0.239 |
| Valvular heart disease | $42(7 \%)$ | $30(7 \%)$ | $3(3 \%)$ | 0.096 |
| Ischaemic heart disease | $20(4 \%)$ | $139(30 \%)$ | $72(20 \%)$ | 0.649 |
| Other | $161(28 \%)$ | $76(16 \%)$ | 0.059 |  |
| No clear single diagnosis | $83(15 \%)$ |  |  | 0.008 |

Online Table 2. Final diagnosis in the Not Heart Failure (NHF) patients.
$p$ values refer to comparisons between the two study sites.
