*Adjusted for AVR as a time-dependent covariate, age, sex, diabetes mellitus, arterial hypertension, dyslipidemia, coronary artery disease, previous myocardial infarction, atrial fibrillation, estimated glomerular filtration rate, New York Heart Association functional class III to IV, left ventricular ejection fraction and aortic valve area.

**Adjusted for age, sex, diabetes mellitus, arterial hypertension, dyslipidemia, coronary artery disease, previous myocardial infarction, atrial fibrillation, estimated glomerular filtration rate, New York Heart Association functional class III to IV, left ventricular ejection fraction, and aortic valve area.

AVR = aortic valve replacement, LAVi = left atrial volume index; TR = tricuspid regurgitation velocity.

Supplemental figures**Figure S1 – Study flow chart**

LA = left atrial; LVEF = left ventricular ejection fraction; TR = tricuspid regurgitation.

Figure S2 – Kaplan-Meier survival curve for all-cause mortality, censored for AVR, according to the classification of LV diastolic function.

AVR = aortic valve replacement; LV = left ventricular.
