

Number of events	173	122	14	22
Pregnancies at risk	869	366	30	37
Percentage of total cohort (%)	66.7	28.1	2.3	2.8

Appendix 1. The ZAHARA I risk score for offspring complications during 1302 completed pregnancies (>20 weeks gestation) in women with congenital heart disease (expressed as % of the total number of completed pregnancies). Data from the first ZAHARA study. Details on how the ZAHARA I risk score for offspring complications was calculated can be found in the methods section. More detail on the first ZAHARA study can be found in reference 2.
